MARBLE COLLECTION

TITAN WAVES GENERAL TRADING

Established in 2020, Titan Waves General Trading has become a trusted international trading company, connecting clients worldwide with high-quality products sourced directly from leading suppliers. Built on a foundation of trust, transparency, and long-term partnerships, we are proud to bring the finest natural stone to the UAE market and beyond.

Through our strategic partnership in Turkey, we now work directly with a family-owned operation that holds vast acres of marble-rich land. From these mountains, some of the world's most beautiful and rare stones are mined. This allows Titan Waves to introduce our own exclusive line of marble, supplied under our own branding, with no intermediaries. Our clients benefit from authenticity, premium quality, and highly competitive pricing.

We specialize in both slabs and blocks, with a strong focus on Onyx and Travertine. Each stone is naturally formed underground over centuries, giving every block and slab its own unique patterns, colors, and character. From warm golden tones to striking green and grey variations, the diversity of Turkish onyx and travertine makes each piece a true work of art from nature.

At Titan Waves, we can accommodate projects of any scale, with the ability to distribute globally. Samples can be arranged on request, and our dedicated team ensures smooth handling from quarry to project delivery.

With Titan Waves General Trading, you are not just buying marble — you are investing in a piece of nature's history, refined to perfection and delivered with excellence.

— CEO

Kristineja Sligaitė

*With its rare beauty and luminous depth, Onyx doesn't just
decorate a space - it defines it.*

ONYX COLLECTION

Our Onyx is a masterpiece of nature, with its naturally occurring colors and intricate patterns formed deep within the earth over thousands of years. Extracted directly from our partner mines in Turkey, each piece reflects the beauty and uniqueness of natural stone. Every slab is one-of-a-kind, offering exclusive elegance that cannot be replicated.

With careful extraction and handling, we ensure that the Onyx is removed with precision to minimize any damage, preserving its integrity and natural brilliance. Once extracted, each block is processed with the highest craftsmanship—polished to perfection and transformed into slabs of exceptional quality.

We provide customized sizes and thicknesses according to client needs, ensuring flexibility for a wide range of projects. The size and thickness of the slabs may vary, and with that, pricing will also differ depending on the specifications and order volume. This allows us to cater to both large-scale architectural projects and exclusive, bespoke designs, always with the assurance of quality and authenticity.

When brilliance meets gravity, the result is Onyx. This extraordinary marble captures light and reflects a richness that no other stone can replicate for those who demand more than beauty Onyx delivers distinction, elegance, and an atmosphere of high class living.

TRAVERTERN COLLECTION

Travertine is one of the most timeless and versatile natural stones, admired for its earthy tones, natural textures, and enduring strength. Formed over centuries by mineral deposits from hot springs and underground rivers, each block of Travertine carries the rich story of nature's craftsmanship. Our Travertine is sourced directly from exclusive quarries in Turkey, a region globally recognized for producing some of the finest and most consistent Travertine varieties.

The stone is carefully extracted from the mines with precision and expertise, ensuring the natural layers and veins remain intact. These natural veins create a distinctive look—whether displayed in the crosscut style, which reveals cloud-like patterns, or the vein-cut style, which highlights the linear flow of the stone's formation. Each technique brings out a unique visual character, allowing designers and architects to choose the style that perfectly matches their vision.

Once extracted, every block undergoes a meticulous process of cutting, polishing, and finishing. The slabs can be customized to different sizes, thicknesses, and surface finishes such as polished, honed, or brushed—offering versatility for a wide range of applications from luxury interiors to exterior facades. With its natural durability, elegant appearance, and timeless charm, Travertine continues to be a preferred choice for high-end residential, commercial, and architectural projects worldwide.

For developers and large-scale projects, ordering marble in blocks offers unmatched flexibility and value. Blocks can be cut and finished according to project requirements, reducing material waste and ensuring a precise fit. This approach is more cost-effective, minimizes damage during transport, and allows complete control over slab dimensions, polishing, and finishing — giving developers both efficiency and luxury in one solution.

Choosing marble in block form is the smart solution for developers and contractors. It allows maximum customization, with slabs cut to exact project specifications while keeping costs under control. Blocks also travel with minimal risk of damage, ensuring the stone arrives in perfect condition, ready to be crafted into premium surfaces for both residential and commercial spaces.
